

PIONEERS OF
PRE-POINTED
BRICK FAÇADE

ABOUT US

ESTABLISHED IN 1993, THE STOFIX NAME IS SYNONYMOUS WITH PIONEERING BRICK SLIP FAÇADES. FOR MORE THAN THREE DECADES, WE HAVE PUSHED THE BOUNDARIES TO CREATE A MODERN METHOD OF CONSTRUCTION SO ARCHITECTS AND SPECIFIERS CAN BRING THEIR VISIONARY PROJECTS TO LIFE.

OFF-SITE CONSTRUCTION

The unique system is pre-pointed and constructed off-site in our factory in Poland. With no height limit, our patented brick slip system is mechanically fixed and utilises a metal backing plate. It is fire-rated over 18m with no height restriction and enables specifiers to choose almost any brick. Stofix brick slip cladding has one of the lowest weights per sqm on the market – from 32 kg per sqm.

PATENTED PRE-POINTED SYSTEM

Stofix was developed in Finland for use in cold weather climates. Our pre-pointed system is the only system on the market that applies approximately 95% of the pointing in a temperature-controlled factory. This significantly reduces on-site pointing time and the brick slip panels can be installed during the harshest environments.

OUR PARTNERS

Our product is sold internationally with partners across the UK, Germany, Norway, Sweden, Slovakia and Belgium. Demand for our product continues to increase and we are furthering our reach by continually introducing partners across the globe.

OUR TEAM

Our factory is led by a strong, committed, ambitious management team who ensure a positive working environment by prioritising employee well-being.

We value effective communication, actively listen to staff feedback and encourage a diverse and equal working environment. We have created a supportive workplace where teamwork is key and we empower individuals to excel.

OUR CULTURE

We foster a culture of open communication, mutual respect and employee satisfaction, which is reflected in our high staff retention rates.

QUALITY, INNOVATION AND OUR SHARED ENVIRONMENT

OUR FOCUS ON QUALITY AND SUSTAINABILITY HELPS US ENSURE CUSTOMER SATISFACTION, MAKE A POSITIVE IMPACT ON THE ENVIRONMENT AND REINFORCE OUR REPUTATION AS LEADERS OF BRICK SLIP FAÇADES.

OUR COMMITMENT TO THE ENVIRONMENT

We believe that innovation should integrate sustainable practices. Eco-friendly approaches underpin everything we do at Stofix to ensure both our customers and the planet benefit.

Our manufacturing process uses 30-40% of the energy typically required to produce traditional bricks. We use natural, kiln-fired clay bricks and Magnelis® rails that are free from harmful elements and hold a full Environmental Product Declaration (EPD). Our logistics strategy is designed to minimise environmental impact and we select transport companies that meet the stringent EURO 6 exhaust emission standards.

PRODUCT QUALITY AND SAFETY STANDARDS

At Stofix, our high-quality standards are not just a promise; they are a guarantee. Our product includes a 20-year manufacturer's warranty and Stofix is certified to BS/EN 13501 & A2/S1:d0 fire safety standards. We are proud of our ISO9001 and ISO1400 accreditations, a testament to our commitment to excellence.

Product quality is measured at 99.8% before our quality control team visually checks each brick slip panel, measures the slips' position and cleans the edges, leaving no room for compromise.

MINIMISE WASTE AND STRINGENT RECYCLING POLICY

By constructing our panels in a controlled factory environment, we significantly reduce waste and all materials are recycled through government-approved schemes.

Crown Place, Nottingham, UK

PARTNER: STOFIX UK
PROJECT: KEYBRIDGE
LOCATION: LONDON, UK
MAIN CONTRACTOR: MOUNT ANVIL
ARCHITECT: ALLIES AND MORRISON

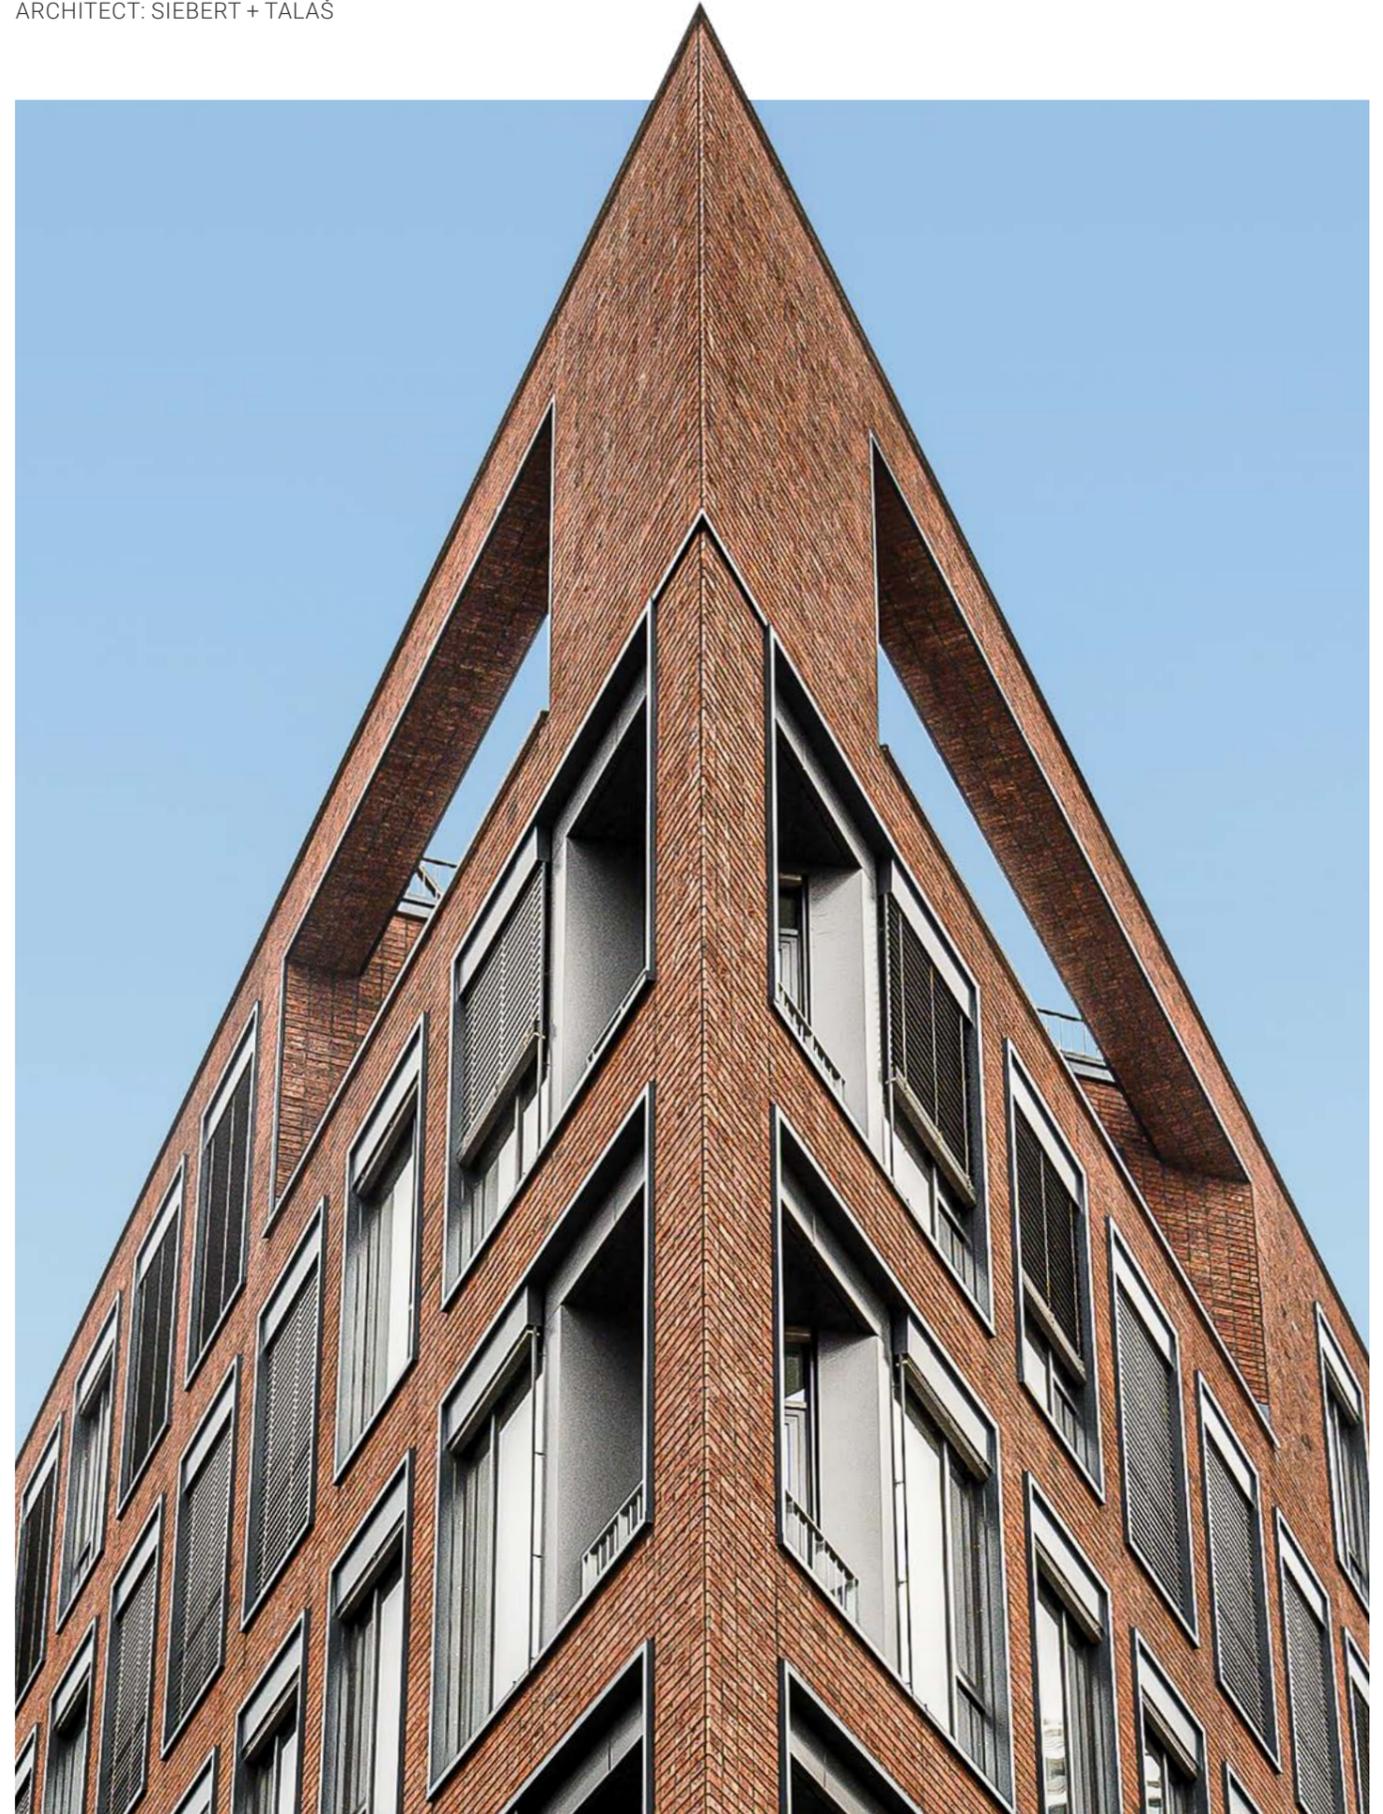

PARTNER: STOFIX NORWAY
PROJECT: MITT HILLEVAAG
LOCATION: STAVANGER, NORWAY
